Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-17, drawn to a polymerization method, classified in class 427, subclass 487.
 - II. Claim 18, drawn to a polymerization method, classified in class 427, subclass 496.
 - III. Claims 19-22, drawn to a method of polymerizing a polymerizable composition on a substrate for producing a pressure-sensitive article, classified in class 427, subclass 487.
-

Distinctness

The inventions are distinct, each from the other because:

2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the inventions I and II are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects since invention II uses both a continuous beam of accelerated electrons and pulses of accelerated electrons to polymerize a polymerizable composition whereas invention I uses only pulses of accelerated electrons.
3. Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the inventions I and III are not disclosed as capable of use together and they have different modes of

operation, different functions, or different effects since method of invention III produces a pressure-sensitive article versus a polymer coated substrate of invention I.

4. Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the inventions II and III they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects since invention II uses both a continuous beam of accelerated electrons and pulses of accelerated electrons to polymerize a polymerizable composition whereas invention III uses only pulses of accelerated electrons.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. A telephone call was made to Mr. George Jonas on September 30, 2002 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
